Preamble  
Puncturing

Since 1995, Z-COM pioneers wireless communication R&D, boasting nearly 30 years of expertise. We've successfully led global Wi-Fi Offload and smart city projects, connecting 500+ million users with millions of carrier-grade Wi-Fi stations. Collaborating with telecom giants in China and India, we actively embrace IoT-era network applications.

As a top-tier provider in wireless and hybrid networking, Z-COM integrates 5G, Wi-Fi, and AIoT technologies. Our strategic deployment includes dedicated networks and edge computing for AIoT, shaping the next-gen mobile broadband solutions.

# EdgeLink-X

AI-Driven Heterogeneous Network Edge Integration Platform

Low Latency · Stability · High Efficiency · Secure Protection

As digital transformation accelerates in smart transportation and railway systems, the stability and resilience of communication networks have become critical to operational safety. When field sensors, surveillance devices, and frontline personnel are simultaneously online, any communication delay or signal interruption can directly impact decision-making and emergency response efficiency.

Leveraging years of experience in wireless networking and edge computing, Z-COM introduces EdgeLink-X—an **AI-driven** heterogeneous network edge-integration solution designed specifically for railway and intelligent transportation environments, seamlessly integrating multiple communication technologies.

The design philosophy of EdgeLink-X centers on “**Edge Intelligence × Heterogeneous Integration × Resilient Connectivity.**” The system architecture integrates multi-layer communication nodes with an edge computing platform, forming a self-adaptive, real-time responsive communication ecosystem that spans from frontline voice communication devices and wireless backhaul links to the edge AI platform.

Within the overall architecture, the IP503H and IP110H serve as on-site IP Radio terminals, enabling real-time voice communication and group coordination among frontline personnel. These devices connect to the network through Z-COM’s wireless access equipment—such as the AG260 Wi-Fi 6 / 5G NR Gateway or the AS710 Wi-Fi 7 Tri-Band AP—allowing them to integrate into a broader communication environment.

The backbone layer is supported by the SP250 Series PTP transmission devices, which provide precise time synchronization and stable data transport. At the core computing layer, the zMEC edge computing platform performs real-time AI analytics and data distribution, ensuring low-latency, highly reliable service operations.

## Cooperate with Z-COM, planning your projects

Z-COM with software & hardware R&D experiences nearly 30 years in Wi-Fi industry is committed to fulfill its social and environmental responsibilities and expect our suppliers to share this commitment.
